# Bus Example Cont'd

Bayes Intro

Henry Overos

Goals

Introduction

You already think like a Bayesian - you just don't know it

Differences between Frequentist and Bayesian Statistics

The Simple Mechanics of Bayesian Estimation

Questions?

Your prior expectation before day 1 is to expect the bus to arrive at exactly 9:00 am

# Bus Example Cont'd

Bayes Intro

Henry Overos

Goals

Introduction

You already think like a Bayesian - you just don't know it

Differences between Frequentist and Bayesian Statistics

The Simple Mechanics of Bayesian Estimation

Questions?

Your prior expectation before day 1 is to expect the bus to arrive at exactly 9:00 am

This prior is largely uninformed - you have no data to back up the validity of the claim

# Bus Example Cont'd

Bayes Intro

Henry Overos

Goals

Introduction

You already think like a Bayesian - you just don't know it

Differences between Frequentist and Bayesian Statistics

The Simple Mechanics of Bayesian Estimation

Questions?

Your prior expectation before day 1 is to expect the bus to arrive at exactly 9:00 am

This prior is largely uninformed - you have no data to back up the validity of the claim

As the days progress, your expectation becomes more informed by data and you update your expected bus arrival, creating a new understanding of the probability distribution of when the bus is most likely to arrive

# Bayes' Theorem

Bayes Intro

Henry Overos

Goals

Introduction

You already think like a Bayesian - you just don't know it

Differences between Frequentist and Bayesian Statistics

The Simple Mechanics of Bayesian Estimation

Questions?

What you did with the bus, put more formally

$$P(B_j|A) = \frac{P(B_j)P(A|B_j)}{\sum_{i=1}^k P(B_i)P(A|B_i)}$$

# Bayes' Theorem

Bayes Intro

Henry Overos

Goals

Introduction

You already think like a Bayesian - you just don't know it

Differences between Frequentist and Bayesian Statistics

The Simple Mechanics of Bayesian Estimation

Questions?

What you did with the bus, put more formally

$$P(B_j|A) = \frac{P(B_j)P(A|B_j)}{\sum_{i=1}^k P(B_i)P(A|B_i)}$$

Named after the Rev. Thomas Bayes (1700-1761) who used conditional probability to estimate unknown parameters

Also Pierre-Simon Laplace independently formulated a similar relationship between prior and conditional probabilities around the same time

# Bayes' Theorem

Bayes Intro

Henry Overos

Goals

Introduction

You already think like a Bayesian - you just don't know it

Differences between Frequentist and Bayesian Statistics

The Simple Mechanics of Bayesian Estimation

Questions?

What you did with the bus, put more formally

$$P(B_j|A) = \frac{P(B_j)P(A|B_j)}{\sum_{i=1}^k P(B_i)P(A|B_i)}$$

Named after the Rev. Thomas Bayes (1700-1761) who used conditional probability to estimate unknown parameters

Also Pierre-Simon Laplace independently formulated a similar relationship between prior and conditional probabilities around the same time

The probability that a theory or hypothesis is true if some event has occurred

# Predicting Terrorist Attacks Example: Sept. 11 (Nate Silver)

Bayes Intro

Henry Overos

Goals

Introduction

You already think like a Bayesian - you just don't know it

Differences between Frequentist and Bayesian Statistics

The Simple Mechanics of Bayesian Estimation

Questions?

How likely is it that someone intentionally flies a plane into a skyscraper in New York?

# Predicting Terrorist Attacks Example: Sept. 11 (Nate Silver)

Bayes Intro

Henry Overos

Goals

Introduction

You already think like a Bayesian - you just don't know it

Differences between Frequentist and Bayesian Statistics

The Simple Mechanics of Bayesian Estimation

Questions?

How likely is it that someone intentionally flies a plane into a skyscraper in New York?

Before the first plane hit the tower - our prediction that terrorists would fly a plane into a skyscraper was small, say 1 in 20,000 or 0.005 percent. It's possible but not something we would ever really consider.

This is our prior

# Predicting Terrorist Attacks Example: Sept. 11 (Nate Silver)

Bayes Intro

Henry Overos

Goals

Introduction

You already think like a Bayesian - you just don't know it

Differences between Frequentist and Bayesian Statistics

The Simple Mechanics of Bayesian Estimation

Questions?

How likely is it that someone intentionally flies a plane into a skyscraper in New York?

Before the first plane hit the tower - our prediction that terrorists would fly a plane into a skyscraper was small, say 1 in 20,000 or 0.005 percent. It's possible but not something we would ever really consider.

This is our prior

It is also the probability of a terrorist attack given the frequency of occurrences in the observed sample data (20,000 days).

# Example Cont'd

Bayes Intro

Henry Overos

Goals

Introduction

You already think like a Bayesian - you just don't know it

Differences between Frequentist and Bayesian Statistics

The Simple Mechanics of Bayesian Estimation

Questions?

Next, we have to examine the probability of event, conditioned on the hypothesis being true. That is, what is the probability that a plane hit a skyscraper if there was a terrorist attack? After the first plane hits, this number is 100 percent. If there are terrorists attacking New York, they're flying the plane into the skyscraper.

# Example Cont'd

Bayes Intro

Henry Overos

Goals

Introduction

You already think like a Bayesian - you just don't know it

Differences between Frequentist and Bayesian Statistics

The Simple Mechanics of Bayesian Estimation

Questions?

We then examine the probability of a plane hitting the tower if terrorists are not attacking (i.e. accidentally). Empirically, we can assume the number is 0.008 this because only two planes had hit skyscrapers in New York prior (1945 and 1946 but these were accidents).

# Example Cont'd

Bayes Intro

Henry Overos

Goals

Introduction

You already think like a Bayesian - you just don't know it

Differences between Frequentist and Bayesian Statistics

The Simple Mechanics of Bayesian Estimation

Questions?

We now have everything we need to predict the likelihood that there is a terror attack occurring when the plane hits:

You already think like a Bayesian - you just don't know it

Differences between Frequentist and Bayesian Statistics

The Simple Mechanics of Bayesian Estimation

Questions?

# The Most Important Thing

## Deriving the Posterior Distribution of the Parameter

$$p(\theta | y) = \frac{p(\theta)L(y|\theta)}{\int p(\theta)L(y|\theta)}$$

## Symbol Key

$y$ : vector of the observed data/outcome variables

$\theta$ : the parameter of the data  $y$ 's distribution

$p(\theta | y)$ : posterior

$p(\theta)$ : The Prior Distribution of

$p(\theta)$ : The Prior Distribution of

$L(y|\theta)$ : The Likelihood function of the outcome  $y$ , given the parameter

Differences between Frequentist and Bayesian Statistics

The Simple Mechanics of Bayesian Estimation

Questions?

$$p(\theta | y) \propto p(\theta)L(\theta | y)$$

The posterior distribution of the parameter we are interested in is equivalent to the prior distribution of the parameter times the likelihood of getting that parameter given the data that we have

Questions?

$$p(\theta | y) \propto p(\theta)L(\theta | y)$$

The posterior distribution of the parameter we are interested in is equivalent to the prior distribution of the parameter times the likelihood of getting that parameter given the data that we have

As we get more data, the importance of the prior will diminish
